Medellín, Colombia

Abstract

After 60 years of the war, Corea has become in one most of the highest economic powers at the globe, many studies suggest the change was possible basically for two reasons, industrial and education policies. Today Corea left the agricultural age behind (94% in 1950 against 7% today) and are living a industrial era, allowing a huge economy growth every year (12 richest country [1], how they have got to those goals based in a educational perspective and how can we apply those models in Colombia?

1 Introduction

Here is my introduction text. There are 2 blank lines before the section heading and one afterwards. Heading text is 12 point bold font. Paragraphs are not indented. I may want a numbered subsection, which is done as follows.

1.1 Previous Work

In subsections there is 1 blank line before the section heading and one afterwards. Heading text is 11 point bold font. Paragraphs are separated by blank lines without tabs.

Throughout I may cite references of the form [2] or [3], and LaTeX will keep track of numbering. The numbers are based on the order you place them in the bibliography, not the order they appear in the text. They should (I believe) be in alphabetical order. LaTeX will put square brackets about the number within the text of your paper. For those of you new to the bibliography package, you may have to run the latex process twice to allow all references to be resolved. You will get a warning about a missing .aux file. Just rerun latex and it will be ok.

2 Summary and Conclusions

This template will get you through the minimum article, i.e. no figures or equations. To include those, please refer to your LaTeX manual and the IEEE publications guidelines. Good Luck!

Acknowledgements

This is how to do an unnumbered subsection, which comes out in 11 point bold font. Here I thank my colleagues, especially Mike Gennert, who know more about Tex and LaTeX than I.
